

BATCH PRODUCTION

With a range of workshop equipment which includes state of the art auto saws, drill presses, bending, rolling, forming and welding technology, Starweld can meet your batch production needs with maximum efficiency.

CASE STUDY

A Rotherham based manufacturer supplying products to the timber window industry, were looking for a manufacturing facility to undertake the production of balance weights. This involved the sourcing of steel stock, cutting to weight, drilling, marking and clean up of approximately 250 tons annually of finished product.

Starwelds connections with the U.Ks biggest steel stockholders, allowed material to be sourced at the most competitive rates. Combined with automated cutting and drilling processes, this enabled the production of these weights to be carried out with maximum cost and time efficiency, which allowed costs to be cut to a level where market entry was possible, taking sales of this product from zero to 250tons annually.

To find out how Starweld can assist you with your batch production requirements, weather it be 10 units or 1 million units, call us on 0114 272 0283 to talk with the sales team
